

PARTNER INTEGRATION OVERVIEW

VePhone is a new service from Group 3 Technology offering VoIP phone calls from a web-browser. Users can access the service from YOUR website enabling YOU to become a Virtual VoIP Operator instantly. Furthermore, VePhone contains a facility for broadcasting live multi-media messages directly to users screens, enabling you to generate extra revenue from sponsored messages and additional services such as IPTV or videos.

VePhone: Simple Setup and Fast rollout

VePhone has been designed to be deployed rapidly so Virtual Operators can start generating revenue from advertising, services and sponsored messages immediately.

About our Technology

VePhone has been developed using G3T's patented e2e Technology, which is a light-weight signalling technology enabling IP calls to be Non-hosted and made directly between the Users. It contains a simple NAT traversal facility enabling plug & go setup by users and is fully encrypted.

Control Panel: Display multi-media content to your customers ...

Use the display areas to sell new services, promote special offers or even broadcast IPTV!

Standard Services for Your Customers

- A real telephone number, used to login to the service on your website from anywhere in the world
- Unlimited free phone calls on the Internet and low-cost calls to landlines & mobiles, saving up to 90%
- Free to receive calls from landlines and mobiles anywhere in the world
- Secure Pre-pay facilities and free online statements and account management.
